

# The HEALTH HAZARDS of HOMOSEXUALITY

By MassResistance – 2017

*This important new book answers the question: **Why**  
should we be concerned about homosexuality?*

The sexual revolution and mainstreaming of homosexuality have created a public health crisis affecting us all. But the media give little attention to the danger of "gay" and lesbian sexual practices and the resulting health problems experienced by the gay-lesbian-bisexual population. Worse, the medical authorities deliver mixed messages to those at high risk while failing to protect the broader public.

Homosexual and bisexual men are most severely affected and are driving the recent increases in STDs. Lesbians, heterosexuals, and youth are increasingly at risk by imitating dangerous "gay" practices.

The book brings together widely dispersed facts, carefully documenting the disproportionate incidence of disease and mental disorders in the GLB community. A brief survey of the "transgender" phenomenon is included. There are up-to-date links in 1,800 endnotes, citing the U.S. Centers for Disease Control, medical professional associations, research journals, LGBT medical and advocacy groups, and media reports.
